SUMMARY

Full Stack Developer with 3.6 years of hands-on experience designing and developing scalable, responsive, and high-performance web applications using NextJS, TypeScript, NodeJS, and ExpressJS. Skilled in engineering RESTful APIs, implementing secure authentication with role-based access control (RBAC), managing complex database operations, and crafting performance-optimized user interfaces. Experienced in building modular, maintainable solutions with clean architecture and seamless API integrations, including AI-driven functionalities.

TECHNICAL SKILLS

- | | |
|--|--|
| • Language | JavaScript, TypeScript, HTML, CSS |
| • Frontend Frameworks & Libraries | ReactJS, NextJS, TailwindCSS, Redux, TanStack Query, Zod, Material UI, Shadcn UI |
| • Backend & APIs | NodeJS, ExpressJS, Prisma, RESTful APIs, JWT, LangChain, OpenRouter, Swagger |
| • Databases & Cloud | PostgreSQL, AWS (EC2, S3, IAM) |
| • Testing & Tools | Vitest, Postman, VS Code, Git, GitHub |

WORK EXPERIENCE

Full Stack Developer - Scita Solutions

Bangalore [Jan 2025 – Present]

- Architect and maintain core features for enterprise products, including the primary SCITA Website and the ATMS (Asset, Attendance, and Application Tracking Management System).
- Design and deliver responsive, highly scalable user interfaces using ReactJS, NextJS, TailwindCSS, and Material UI, improving overall rendering performance across screen sizes.
- Engineered 20+ secure RESTful endpoints using NodeJS and ExpressJS, streamlining data transfer between frontend modules and PostgreSQL databases.
- Implemented robust authentication, authorization workflows, and fine-grained Role-Based Access Control (RBAC) utilizing JWT to protect sensitive enterprise resources.

PROFESSIONAL PROJECTS

SciToll | Frontend Developer

Tech Stack: ReactJS, TypeScript, TailwindCSS, NodeJS, ExpressJS, PostgreSQL

- Developed and maintained SciToll, an intelligent toll management web application for real-time tracking of toll-gate devices and financial transactions.
- Built modules to track vehicle movements, automated toll collection logs, and detailed plaza-level transaction reports.
- Engineered comprehensive audit and reporting tools to track collected revenue and automatically identify transaction discrepancies.
- Implemented responsive monitoring dashboards that provided operations teams real-time visibility into traffic flow and toll-gate hardware status.

ATMS (Advanced Traffic Management System) | Frontend Developer

Tech Stack: ReactJS, JavaScript, TailwindCSS, Redux, NodeJS, ExpressJS, PostgreSQL

- Constructed high-density data visualization dashboards leveraging ReactJS and Redux for state management.
- Built clean, responsive interfaces using TailwindCSS, optimized for low latency across field operators' mobile and desktop browsers.
- Integrated authentication mechanisms and role-based access controls to safeguard critical traffic control commands.
- Maintained strict clean architecture standards to ensure high maintainability, modularity, and component reusability.

PERSONAL PROJECT

AI-Powered Expense Tracker | Full Stack Developer

Tech Stack: NextJS, ReactJS, TypeScript, TailwindCSS, Shadcn UI, NodeJS, PostgreSQL, LangChain, OpenRouter, AI APIs

- Architected an AI-powered financial management platform enabling users to track expenses, establish dynamic budgets, set savings goals, and analyze spending habits.
- Integrated OpenRouter and LangChain AI models to deliver personalized spending recommendations, identify recurring patterns, and suggest actionable savings strategies.
- Built dynamic data visualization components with options to export financial reports across multiple formats (CSV, PDF).
- Designed and implemented clean frontend component architecture coupled with optimized API endpoints to maintain smooth user interaction.

EDUCATION & CERTIFICATIONS

- **Bachelor of Engineering (B.E.)** – Mechanical Engineering (79%)
- Meta Front-End Developer Professional Certificate
